

EZI TIP

A straight forward solution to the problem of fitting up bulky pneumatic Hoist and PTO controls into your truck cab. Avoid the hassle of plumbing a multitude of air lines into and through your cab, to connect to one or more bulky control levers.

**Truck only or
 Truck & Trailer Operation
 12 or 24 Volt**

Simple 2 piece construction:
 Made using standard industry components, for reliable operation, and better quality.

Compact design:
 With installed dimensions of only 220 x 100 x 80mm overall dimensions means that the cab control can be easily placed to best suit the driver and application.

Easy to install:
 The cab control is attached via a 'u' shaped mounting bracket, fixed in your selected location. This is connected to a pneumatic solenoid valve bank mounted on the chassis by a wiring loom. (We recommend installation by a registered Auto Electrician).

Standard 7 core lead:
 The wiring loom is standard 7 core flex, fitted with a compact connector, to plug into the controller. No air lines in the cab means quick and easy installation.

Logical function:
 Easy to learn and operate, EziTip uses standard Hella illuminated switches to indicate function and activity.

Weatherproof:
 Reliable MAC weatherproof pneumatic valves, means the chassis control block is also compact.

**TDET12V - 12 Volt
 TDET24V - 24 Volt**
