

SEATS

DAMPERS

Dampers control and reduce rebound from the seat suspension, placement and size depends on the seat make and model. If a replacement is required and make or model are not known, advise our Seating Team: Location of the damper, end styles and sizes, length extended, compressed, and diameters.

AIR SPRING

TRT has a range of Air Springs to suit Bostrom, KAB, and Isringhausen.

CONTROLS

Air suspension systems are controlled by either a manual system such as this Bostrom push pull valve, or automatically like this KAB AutoAir valve, TRT can repair your old seat to keep you running.
